Innovative, safe and energy-efficient

Bottle-to-Bottle, Fibre-to-Fibre & PET Inline Sheet
live in operation!

State-of-the-art PET recycling technologies: Innovative, safe and energy-efficient

What are the trends and challenges in PET food grade recycling? Which innovative software tools help you to quickly and easily assess your rPET pellets in terms of food grade suitability? Which PET fiber-to-fiber recycling technologies give you perfect control over the spinning finish and enable you to achieve recycled pellets with high color fidelity and excellent mechanical properties? How do you combine reliable technical performance with remarkably high energy efficiency? And what is the current legislation regarding food suitability in PET recycling? Answers to these and many other questions will be answered at the EREMA Recycling Performance Day on October 24, 2024.

Look forward to exciting presentations and experience state-of-the-art systems in the bottle-to-bottle, PET inline sheet and PET fiber-to-fiber recycling sectors live in operation. See the performance and high efficiency of these systems for yourself. On October 24, 2024 in Ansfelden, Austria. Make a note of this date and register now!
